INDUSTRIAL AND INSTITUTIONAL CLEANING
AND MAINTENANCE PRODUCTS

2021

Theochem is a full-service chemical manufacturer and marketer of branded, private label and custom blended products. Theochem services retail, food service, industrial, institutional, hospitality and janitorial markets. Contract manufacturing and consumer segments continue to add to the company's overall growth.

OUR HISTORY

Theochem was founded in 1962 by Speros P. Theofilos. He believed in the American dream and the future of custom packaging and the private labeling of quality cleaning and sanitary maintenance products. What originally started in a 1000 sq. ft. building in Ybor City, Florida, grew tenfold within a few short years followed by numerous acquisitions. These early acquisitions not only created the foundation for our current product groups, but also positioned the company for years of innovative and profitable growth designed to make our maintenance programs efficient, cost effective and in total compliance.

OUR CORPORATE PHILOSOPHY

Quality is never an accident; it is always the result of high intention, sincere effort, intelligent direction and skillful execution. It represents the wise choice of many alternatives. Our philosophy is not to ask for an order until we roll up our sleeves and identify our customer's needs and wants. The products in the Theochem line are time tested and continuously upgraded in quality as new developments occur within the chemical research community.

OUR MISSION STATEMENT

Solutions for a Cleaner World® is both our slogan and our guarantee. Theochem is dedicated to providing a healthy, safe environment with the highest quality products that protect our families, employees and customers.

THEOCHEM TODAY

Theochem is a totally integrated company in north Tampa which houses our corporate office, a state-of-the-art liquid and powder manufacturing plant, modern chemical laboratory, an in-house graphic arts and printing department, plus a well-equipped product testing and training facility.

DISINFECTANTS

Used on non-porous surfaces and objects to destroy or irreversibly inactivate infectious fungi and bacteria but not necessarily their spores. Disinfectant products are divided into two major types: Hospital and General Use. Hospital type disinfectants are the most critical to infection control and are used on medical and dental instruments, floors, walls, bed lines, toilet seats, and other surfaces. General Use disinfectants are the major source of products used in households, swimming pools, and water purifiers.

GERMICIDES

Used to prevent infection and decay by inhibiting the growth of microorganisms.

SANITIZERS

Used to reduce, but not necessarily eliminate, microorganisms from the inanimate environment to levels considered safe as determined by public health codes or regulations. Sanitizers include food contact and non-food contact products. Sanitizing rinses for surfaces such as dishes and cooking utensils, as well as equipment and utensils found in dairies, food-processing plants, and eating and drinking establishments, comprise the food contact sanitizers. These products are important because they are used in sites where consumable food products are placed and stored. Non-food contact surface sanitizers include carpet sanitizers, air sanitizers, laundry additives, and in-tank toilet bowl sanitizers.

TERMS YOU SHOULD KNOW

ANTIMICROBIAL:	Agent which inhibits or destroys bacteria, fungi, protozoa or viruses that are pathogenic.
ANTISEPTIC:	A chemical agent that prevents or inhibits the growth of micro-organism microbes, particularly on the skin.
BACTERICIDE:	A chemical agent that destroys bacteria.
DISINFECTANT:	A chemical that destroys vegetative forms of harmful microorganisms, but does not ordinarily kill bacterial spores.
FUNGICIDE:	A chemical agent that destroys fungi.
GERMICIDE:	Any substance that kills germs. A disinfectant.
SANITIZER:	An agent that reduces the number of bacteria to a safe level, but does not completely eliminate them, as judged by public health requirements. Usually in food service areas.
VIRUCIDE:	A chemical agent that kills viruses.
